Blue Elephant Systems

Blue Elephant Systems GmbH is an international operating company, developing and implementing software to improve the IT operational safety. Large IT infrastructures can be controlled and monitored, analyzed and evaluated. The company's goal is to optimize the use of IT and to achieve the maximum operational reliability.

MIDAS Product Family

The MIDAS Product Family (Management Information, Documentation and Automation System) unifies all the functions of IT operations management under a user-friendly and intuitive GUI. It supports IT administrators and application managers to increase productivity and profitability while reducing costs.

The product family consists of a wide range of complementary software members providing tools which can be combined as individual as your company is:

- **MIDAS Supervisor:** Checks IT monitoring processes on multiple levels and uses the data to trigger alerts and create reports.

- **MIDAS Analyzer:** Identifies and reduces message problems with analyzing end-to-end reports and views.

- **MIDAS Configurator:** Improves the quality of IT monitoring by enabling multiple levels of access to the configuration data.

- **MIDAS Administrator:** Extended capabilities for IT monitoring by including advanced policy development, packaging, release management, desired state verification and deployment.

- **MIDAS Synchronizer:** Provides a ready-to-use functionality for replicating changes across multiple monitoring servers.

- **MIDAS Outage Manager:** Simplifies the usage and management of outages in the IT environment.

- **MIDAS Debugger:** Reduces the number of tools and actions required for testing policy modifications.

- **MIDAS Inventory:** Enables rapid identification of new and changed systems to ensure up-to-date infrastructure information.

- **MIDAS Operational Value Pack:** Complements HPOM's capabilities by integrating additional monitoring functionalities.

- **MIDAS Service Builder:** Provides an easy-to-use graphical interface for creating, modifying and exporting service trees.

- **MySQL SPI for HPOM:** Integrates the monitoring of the performance and availability of MySQL databases in HPOM.

- **API Toolkit:** Extends access to APIs by supporting various additional programming languages.

- **HPOM Administration UI**: Graphical HPOM basic configuration editor developed on MIDAS technology.

Professionalize IT Monitoring

Consulting

Want to experience the difference between an IT monitoring product and an IT monitoring solution? Does your IT monitoring have to meet your business objectives? Is your enterprise IT environment as dynamic as your company?

Blue Elephant Systems has excelled with IT monitoring expertise for more than 100 companies of the Fortune Global 500 list. Our consultants do not believe in theoretical "best practices". They look beyond standard solutions to empower companies. We form a partnership with our clients to deliver customized IT monitoring solutions that are tailored to their unique situation. We also resolve the most crucial IT monitoring issues through an integrated approach to help create a lasting and competitive advantage for our clients.

Our customized approach brings together the deep insight into the IT monitoring and enterprise environments and the collaboration of your organization. This ensures that all aspects from technology to business, from detection to closing a gap, are considered – forming a unit out of your IT which is as flexible as your entire company.

"As businesses become more global and increasingly competitive, emphasis on process automation and optimization to gain a competitive advantage increases. IT operations are not capable of keeping up with this increased demand for service. Blue Elephant Systems enables enterprises to implement highly scalable, highly adaptable IT management processes which are necessary to achieve business goals."

Joachim Hoernle, Managing Director and Co-founder of Blue Elephant Systems

Training

Are you planning the launch of an IT management system? Are you looking for a partner to evaluate the monitoring of your IT systems? Maybe you are also interested in IT management training? Or perhaps you need system monitoring tools to enhance your current solution?

Our trainers have worked with HP Education and the HP Software division, developing HP course material and presenting training classes on behalf of HP for many years. We have expert know-how in HP Operations Manager (HPOM) and beyond, covering most aspects of modern IT monitoring. Typical MIDAS customers use the product family to monitor the hardware and software components in their complex IT infrastructure. Often these customers are large, internationally operating companies with a centralized organization and a geographically distributed IT.

No matter which situation applies to your company, Blue Elephants Systems offers training for various types of IT monitoring, tailored to your specific needs: online demo, workshop, classroom or web-based training. Would you like to elevate your IT management to new levels? Blue Elephant Systems can provide you with a solution.

Products and Company

The MIDAS Product Family optimizes and expands the usage of HP Operations Manager (HPOM), boom automatically monitors heterogeneous IT infrastructures, and MOSCITO is a management information system for a company's managerial staff. Blue Elephant Systems GmbH is located in Stuttgart, Germany, and joined by Blue Elephant Systems Inc., based in Tuscaloosa, AL, U.S.A.
